

As **Development Engineer Aviation Technology (m/w/d)**

you will be responsible for the development, approval and technical support of internal and external manufacturing processes.

Your tasks include:

- Process owner of special processes and main contact for materials technology and laboratory
- Planning, commissioning and optimisation of devices and programmes as well as carrying out test series for process stability
- Collaboration in the calculation of new projects as well as project-related support of customers, suppliers and internal departments
- Preparation and maintenance of working documents, investigation reports and standards
- Recognising development potential and independent further development of technologies

We are looking for a committed personality with the following profile:

- Completed engineering studies in the field of mechanical engineering, production technology or comparable qualification with relevant professional experience
- In-depth knowledge of materials science and welding technology
- CAD and programming skills desirable
- Creative curiosity and openness to implement new technical solutions on aerospace components
- Hands-on mentality and enjoyment of empirical activities

Your benefits at Binder:

We offer you a challenging and varied job in an innovative company with flat hierarchies. You will work in a motivated team and have the opportunity to develop yourself both professionally and personally. We offer you a performance-related salary as well as flexible working hours and a company pension scheme.

Exactly yours? Apply now, stating your starting date and salary expectations!
